Enseignants	Demarest Stefaan ;Gisle Lydia ;Lorant Vincent (coordinateur(trice)) ;
Langue d'enseignement	Anglais
Lieu du cours	Bruxelles Woluwe
Préalables	The course is limited to students having a good level of English. <i>Le(s) prérequis de cette Unité d'enseignement (UE) sont précisés à la fin de cette fiche, en regard des programmes/formations qui proposent cette UE.</i>
Thèmes abordés	Evidence-based decision making in health policy requires to have health data readily available and monitored over time. One way to achieve this goal and obtain valid health-related information is to conduct health surveys. Such surveys also offer an important source of data for epidemiologic research as they allow estimating, amongst other, the prevalence of disorders in a specific population, the use of and access to health care services, the distribution of risky health behaviours across various population groups, or the observance of preventive behaviours. This course is intended to introduce students to the principles of survey methodology and practical aspects of survey design and implementation in the context of health research. It will allow students to conceive and design a survey to gather health-related information that meets a specific research question. This course is instrumental for all students planning to gather their own data/or use survey data in the context of their master or PhD thesis.
Acquis d'apprentissage	<p><b>A la fin de cette unité d'enseignement, l'étudiant est capable de :</b></p> <ul style="list-style-type: none"> <li>· Goal: By the end of this course, the student will have learned how to develop a complete survey protocol to answer a specific research question. More specifically, he/she will understand how to:</li> <li>· Formulate a research question and develop hypotheses that can be studied using survey methods.</li> </ul> <p>1</p>

	<p>Essay presentation and discussion</p> <p>Data management and communication of survey results</p> <p>Evaluation</p>
