Teacher(s)	Truyts Tom ;	
Language :	Dutch	
Place of the course	Bruxelles Saint-Louis	
Learning outcomes	At the end of this learning unit, the student is able to: Understand the problems studied by economists, the elementary concepts of micro-economic analysis, a basic economic cycle and the role of markets as a coordination mechanism Understand the analysis of competitive markets Study the behavior of firms Evaluate the functioning of markets, and identify and understand different solutions to market failures Apply these concepts to carry out a rigorous analysis of several "real-life" economic problems and economic policy recommendations; Process information found in general media efficiently and carry out effective research, and critically synthetized the contents of economic articles/texts.	
Evaluation methods	Written exam (90% of final result) and paper assignment (10 of final result). The final exam requires a knowledge of the theoretical concepts as well as the ability to apply those concepts to the resolution of applied exercises (similar but not identical to those treated in the exercise sessions) and the analysis of real-life economic problems.	
Teaching methods	a) Plenary lectures During the plenary lectures, the professor presents the concepts and mechanisms associated to the different models. Those lectures will follow the course outline presented above. From a methodological point of view, numerous press articles will be used as bibliographical support beyond the reference book. The objective is twofold: train the students to a careful reading and synthesis of economic texts, as well as draw the students' attention to the omnipresence of economic questions in the public debate. b) Exercise sessions (TA sessions) The exercise sessions are carried out in small groups, and aim at checking knowledge acquisition as well as applying the theoretical concepts presented in class to solve exercises and case studies. So as to benefit from those sessions, the students should have reviewed the corresponding lectures. c) Personal work Regular personal work is critical for success. As the course goes on, each student is expected to devote sufficient time so as to make sure he/she understands the subjects being treated. The revision period at the end of the semester should not be the occasion to discover the course contents, but rather to strengthen the comprehension of a course that is already known by the student. Personal meetings with the course assistants and the professor can be arranged for the students who specifically ask it. d) Paper assignment Each student will hand in a short paper in which concepts of the course are applied to a press article, chosen by the student from a list of press articles made available on the course website.	
Content	The Economics 1 course will start with a presentation of the economic model of demand and supply in order to provide an analysis of the mechanisms of competitive markets (price determination, equilibrium quantity, etc.). It will also be the occasion to investigate the impact of some public policies such as price control and indirect taxation on the competitive equilibrium. The course will then determine why, and under which conditions, free trade can be viewed as an efficient way to coordinate the actions of specialized economic agents.
