Q1

Teacher(s)	Duque Julie (coordinator) ;Missal Marcus ;
Language :	French
Place of the course	Louvain-la-Neuve
Prerequisites	<i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i>
Main themes	- Introduction to the most important techniques in Neurosciences: recordings, reversible lesions, transcranial magnetic stimulation, functional brain imaging' - Receptors and transduction mechanisms - Central processing of sensory informations: vision, tactile, pain, proprioception and balance. - Motor control: spinal reflexes, muscle tone, posture, corticospinal system, motor cortical areas, basal ganglia, cerebellum, voluntary movements, locomotion, motor coordination' - Sensori-motor integration; role of the posterior parietal cortex in movement control. - Distinct forms of learning and memory.
Learning outcomes	At the end of this learning unit, the student is able to : <ol style="list-style-type: none"> 1 - To study the normal function of the sensory systems, especially the visual and somatosensory systems. - To study the neurophysiological mechanisms responsible for controlling movements, from the simple reflexes to the most sophisticated voluntary hand movements. - To investigate the neural basis of learning and memory. - To provide the basic knowledge for further advanced Neuroscience courses.
Evaluation methods	Written exam with multiple choices questions. There are 30 questions with 5 choice but only one is correct. The threshold to pass is set to 10/20 or more. This threshold is fixed to at least 18 correct responses over 30. Below

Programmes containing this learning unit (UE)				
Program title	Acronym	Credits	Prerequisite	Learning outcomes
Bachelor in Motor skills : General	EDPH1BA	4	LFSM1101 AND LFSM1102 AND LFSM1104 AND LIEPR1021 AND LIEPR1022	
Bachelor in Physiotherapy and Rehabilitation	KINE1BA	5	LFSM1101 AND LFSM1104 AND LKINE1006
